

ONGOING LEADERSHIP IN THE TREATMENT OF VARICOSE AND SPIDER VEINS

Founded in 1991, the Triangle area's first clinic dedicated exclusively to the treatment of chronic vein problems continues to provide the most advanced, comprehensive care.

When the valves in veins fail, blood is not efficiently returned to the heart to be replenished with oxygen. It pools in the diseased veins, causing ugly superficial bulges and discolorations that signal a need for experienced, professional vascular treatment.

At Triangle Vein Clinic, a full complement of procedures treats the entire spectrum of vein problems.

"We have treated thousands of varicose vein patients using comfortable radiofrequency ablation with a 100 percent success rate," informs Dr. Victor Medina, whose leadership in vein treatment has attracted the attention of magazines as well as CBS, ABC, and NBC affiliates.

Called Venefit™ (formerly known as VNUS Closure™), the procedure is the only minimally invasive ablation treatment that uses radiofrequency energy to contract the collagen in the diseased vein walls, causing them to collapse and seal. Once a leg vein is closed, blood flow is redirected to healthy veins.

"Our patients are pleased that they can return to regular activities within 24 hours and can see and feel the positive results in such a short time," notes Dr. Medina. As an adjunct to Venefit, supplemental injection sclerotherapy is performed to clear residual varicosities.

For the tiniest problem veins

Among the other treatment options available at Triangle Vein Clinic is VeinGogh™ Ohmic Thermolysis, an advanced technology that targets the fine but cosmetically unattractive veins (telangiectasias) on the face. The veins shrink and disappear, restoring the skin's youthful clarity.

"We stay on the forefront of such new technologies, bringing those that prove most effective and beneficial to our patients," says Dr. Medina.

"No one needs to continue suffering the discomfort and embarrassment of venous problems when excellent therapies are readily available here at our clinic. Venous disease does not improve on its own, and it can significantly worsen over time," he advises. "The sooner we can diagnose the problem and complete treatment, the better."

» PLEASSED PATIENTS REPORT...

I am 35 years old, and after two pregnancies, the varicosity in my right leg had gotten pretty bad. After meeting with Dr. Medina, we scheduled the radiofrequency ablation procedure. Wow...what a difference! I am thrilled with the results! No more varicosity, no more aching leg, no more bulging vein. The procedure itself was painless and fairly quick. I highly recommend this procedure to anyone!
—Mindy W.

I had the Venefit procedure, and I must say that getting a tooth filled was more traumatic. Dr. Medina was thorough in explaining the procedure to me, so there were no surprises. It was painless with instant results!
—Nancy M.
